

TCP Three-Way Handshake (Easy Trick + Explanation)

TCP is a reliable, connection-oriented protocol. Before data transmission, TCP establishes a connection using a three-way handshake.

Diagram Flow (Concept):

Client → Server : SYN

Server → Client : SYN + ACK

Client → Server : ACK

■■■■■ Trick (Phone Call Example):

SYN = "Hello?"

SYN + ACK = "Yes, who is this?"

ACK = "It's me, let's talk"

■■■ ■■■■?

Three-way handshake is needed to ensure that both sender and receiver are ready for communication and to synchronize sequence numbers before data transfer.

Exam Writing Line: TCP uses three-way handshake to establish a reliable connection before data transmission.
